CONTENTS

Volume 53, Issue Nos. 1–12 (2007)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 January

Tracking accuracy of a semi-Lagrangian method for advection–dispersion modelling in rivers: S. Néelz and S. G. Wallis 1

An eigenvector-based linear reconstruction scheme for the shallow-water equations on two-dimensional unstructured meshes: S. S. Frazão and V. Guinot 23

Higher-order bounded differencing schemes for compressible and incompressible flows: K. C. Ng, M. Z. Yusoff and E. Y. K. Ng 57

A coupled finite volume method for the solution of flow processes on complex geometries: D. McBride, T. N. Croft and M. Cross 81

Application of Chimera grid to modelling cell motion and aggregation in a narrow tube: B. Chung, P. C. Johnson and A. S. Popel 105

A parametric finite-difference method for shallow sea waves: A. G. Bratsos, I. T. Famelis and A. M. Prospathopoulos 129

Compressible flow equations based on moving coordinates determined by the wave speed: Z. Chen, B. Gao and Z.-N. Wu 149

Issue No. 2, 20 January

Extension of domain-free discretization method to simulate compressible flows over fixed and moving bodies: C. H. Zhou, C. Shu and Y. Z. Wu 175

Pseudo-characteristic formulation and dynamic boundary conditions for computational aeroacoustics: S.-Y. Lu and P. Sagaut 201

An unsteady single-phase level set method for viscous free surface flows: P. M. Carrica, R. V. Wilson and F. Stern 229

Numerical simulation of isothermal nonwetting: C.-W. Kuo, J.-C. Chen and G. P. Neitzel 257

Numerical modelling of complex turbulent free-surface flows with the SPH method: an overview: D. Violeau and R. Issa 277

Numerical simulation of flows around two circular cylinders by mesh-free least square-based finite difference methods: H. Ding, C. Shu, K. S. Yeo and D. Xu 305

Lattice Boltzmann-based single-phase method for free surface tracking of droplet motions: X. Q. Xing, D. L. Butler and C. Yang 333

Issue No. 3, 30 January

Numerical predictions of flow and thermal fields in an enclosure with two periodically moving walls: C.-H. Cheng and K.-S. Hung 353

Using fully implicit conservative statements to close open boundaries passing through recirculations: M. Darbandi and S. Vakilipour 371

A second-order BGK scheme for the equations of radiation hydrodynamics: S. Jiang and W. Sun 391

An operator splitting scheme for the stream-function formulation of unsteady Navier–Stokes equations: C. I. Christov and X.-H. Tang 417

Multigrid third-order least-squares solution of Cauchy–Riemann equations on unstructured triangular grids: H. Nishikawa 443

Hierarchical distributed metamodel-assisted evolutionary algorithms in shape optimization: M. K. Karakasis, D. G. Koubogiannis and K. C. Giannakoglou 455

A robust numerical method for flow through a pipe driven by an oscillating pressure gradient: A. R. Ansari, J. J. H. Miller and G. I. Shishkin 471

Stability of convective flows in cavities: Solution of benchmark problems by a low-order finite volume method: A. Y. Gelfgat 485

A sliding interface method for unsteady unstructured flow simulations: E. L. Blades and D. L. Marcum 507

Issue No. 4, 10 February

Hybrid finite compact-WENO schemes for shock calculation: Y. Shen and G. Yang ... 531

A numerical simulation on diffuser-nozzle based piezoelectric micropumps with two different numerical models: J. Jeong and C. N. Kim 561

On stabilized finite element methods for the Stokes problem in the small time step limit: P. B. Bochev, M. D. Gunzburger and R. B. Lehoucq 573

Solving viscoelastic free surface flows of a second-order fluid using a marker-and-cell approach: M. F. Tomé, J. L. Doricio, A. Castelo, J. A. Cuminato and S. McKee 599

An application of the finite difference-based lattice Boltzmann model to simulating flow-induced noise: H. Kang and M. Tsutahara 629

Adaptive wall functions for the v^2-f turbulence model: G. Kalitzin and G. Medic 651

Algebraic multigrid and incompressible fluid flow: R. Webster 669

Computational study of the axial instability of rimming flow using Arnoldi method: S. H. Bae and D. H. Kim 691

Issue No. 5, 20 February

Dynamics of large solid particles in bioconvective sedimentation: P. Geng and A. V. Kuznetsov 713

A two-phase flow interface capturing finite element method: C. Devals, M. Heniche, F. Bertrand, P. A. Tanguy and R. E. Hayes 735

Comparison of derivative free Newton-based and evolutionary methods for shape optimization of flow problems: Z. Harth, H. Sun and M. Schäfer 753

Adaptive Euler simulations of airfoil–vortex interaction: L. Tang and J. D. Baeder 777

Comparison of haemodynamics in cerebral aneurysms of different sizes located in the ophthalmic artery: A. Valencia, S. Botto, J. Sordo, M. Galvez and L. Badilla .. 793

Simulation of rapidly varying flow using an efficient TVD–MacCormack scheme: D. Liang, B. Lin and R. A. Falconer 811

Further application of hybrid solution to another form of Boussinesq equations and comparisons: K. S. Erduran 827

Numerical identification of flow-induced oscillation modes in rectangular cavities using large eddy simulation: G. Rubio, W. De Roeck, M. Baelmans and W. Desmet 851

Evaluation of well-balanced bore-capturing schemes for 2D wetting and drying processes: F. Marche, P. Bonneton, P. Fabrie and N. Seguin 867

Issue No. 6, 28 February

Unsteady simulations of the flow around a short surface-mounted cylinder: R. J. Pattenden, N. W. Bressloff, S. R. Turnock and X. Zhang 895

Optimization of heat-transfer rate into time-periodic two-dimensional Stokes flows: J. P. B. Mota, A. J. S. Rodrigo and E. Saatdjian 915

Prediction of losses in the flow through the last stage of low-pressure steam turbine: S. Dykas, W. Wróblewski, H. Łukowicz 933

A methodology for high performance computation of fully inhomogeneous turbulent flows: D. You, M. Wang and R. Mittal 947

Integrated radial basis functions-based differential quadrature method and its performance: C. Shu and Y. L. Wu 969

Efficiency of a POD-based reduced second-order adjoint model in 4D-Var data assimilation: D. N. Daescu and I. M. Navon 985

A piecewise linear approach to volume tracking a triple point: B. Y. Choi and M. Bussmann 1005

A higher-order Boussinesq-type model with moving bottom boundary: applications to submarine landslide tsunami waves: B. Ataie-Ashtiani and A. N. Jilani 1019

Comparing analytical and numerical solution of nonlinear two and three-dimensional hydrostatic flows: V. Casulli and P. Zanolli 1049

A Sinc-collocation method with boundary treatment for the Stokes equations: C. Li and X. Wu 1063

Issue No. 7, 10 March

Implementation of CLEAR algorithm on non-orthogonal curvilinear co-ordinates for solution of incompressible flow and heat transfer: Z. G. Qu, Y. L. He, C. Y. Zhao and W. Q. Tao 1077

An unstructured/structured multi-layer hybrid grid method and its application: W. Sang and F. Li 1107

A non-diffusive, divergence-free, finite volume-based double projection method on non-staggered grids: A. Aprovitola and F. M. Denaro 1127

Assessment of adaptive and heuristic time stepping for variably saturated flow: C. M. F. D'Haese, M. Putti, C. Paniconi and N. E. C. Verhoest 1173

Issue No. 8, 20 March

Special Issue:
Finite Element for Flow Problems (FEF) 2005: Part 2

Editorial: O. Hassan 1195

A node-centred finite volume formulation for the solution of two-phase flows in non-homogeneous porous media: D. K. E. de Carvalho, R. B. Willmersdorf and P. R. M. Lyra 1197

A modified space–time finite element method for simulation of immiscible incompressible two-phase flow in heterogeneous porous media: P. A. Ferdowsi and M. T. Manzari 1221

A method for time accurate turbulent compressible fluid flow simulation with moving boundary components employing local remeshing: O. Hassan, K. A. Sørensen, K. Morgan and N. P. Weatherill 1243

Electromagnetic scattering simulation using an **H**(curl) conforming *hp* finite element method in three dimensions: P. D. Ledger, K. Morgan and O. Hassan 1267

On level set modelling of bi-fluid capillary flow: A.-C. Lesage, O. Allain and A. Dervieux 1297

Simulation of flows with violent free surface motion and moving objects using unstructured grids: R. Löhner, C. Yang and E. Oñate 1315

Shape reconstruction from medical images and quality mesh generation via implicit surfaces: J. Peiró, L. Formaggia, M. Gazzola, A. Radaelli and V. Rigamonti 1339

Parallel remeshing of unstructured volume grids for CFD applications: U. Tremel, K. A. Sørensen, S. Hitzel, H. Rieger, O. Hassan and N. P. Weatherill 1361

A numerical strategy for modelling rotating stall in core compressors: M. Vahdati 1381

A combined pFFT-multipole tree code, unsteady panel method with vortex particle wakes: D. J. Willis, J. Peraire and J. K. White 1399

issue No. 9, 30 March

A fourth-order compact finite volume scheme for fully nonlinear and weakly dispersive Boussinesq-type equations. Part II: Boundary conditions and validation: R. Cienfuegos, E. Barthélemy and P. Bonneton 1423

Error assessment of lattice Boltzmann equation method for variable viscosity flows: J. Chao, R. Mei and W. Shyy 1457

Edge-based data structures for a symmetric stabilized finite element method for the incompressible Navier–Stokes equations with heat transfer: R. A. Kraft, A. L. G. A. Coutinho and P. A. B. de Sampaio 1473

Compatibility between finite volumes and finite elements using solutions of shallow water equations for substance transport: L. Postma and J.-M. Hervouet 1495

A general approximate-state Riemann solver for hyperbolic systems of conservation laws with source terms: J. Lhomme and V. Guinot 1509

Issue No. 10, 10 April

Comparison of adjoint-based and feature-based grid adaptation for functional outputs: R. Balasubramanian and J. C. Newman III 1541

A reduced-order approach to four-dimensional variational data assimilation using proper orthogonal decomposition: Y. Cao, J. Zhu, I. M. Navon and Z. Luo 1571

Two-dimensional MHD solver by fluctuation splitting and dual time stepping: Ş. Balcı and N. Aslan 1585

A high-order accurate method for two-dimensional incompressible viscous flows: A. K. De and V. Eswaran 1613

Numerical simulation of the galvanizing process during GA to GI transition: F. Ilinca, F. Ajersch, C. Baril and F. E. Goodwin 1629

A computational solution of hydromagnetic-free convective flow past a vertical plate in a rotating heat-generating fluid with Hall and ion-slip currents: H. Naroua 1647

Issue No. 11, 20 April

Improvement of mass source/sink for an immersed boundary method: W.-X. Huang and H. J. Sung 1659

Numerical simulation of turbulent impinging jet on a rotating disk: A. Abdel-Fattah . . . 1673

Direct numerical simulation of spanwise rotating turbulent channel flow with heat transfer: N.-S. Liu and X.-Y. Lu 1689

Hybrid lattice Boltzmann finite-difference simulation of axisymmetric swirling and rotating flows: H. Huang, T. S. Lee and C. Shu 1707

A hybrid immersed-boundary and multi-block lattice Boltzmann method for simulating fluid and moving-boundaries interactions: Y. Sui, Y.-T. Chew, P. Roy and H.-T. Low . . 1727

A numerical method for flows in porous and homogenous fluid domains coupled at the interface by stress jump: P. Yu, T. S. Lee, Y. Zeng and H. T. Low 1755

Issue No. 12, 30 April

Shallow flow simulation on dynamically adaptive cut cell quadtree grids: Q. Liang, J. Zang, A. G. L. Borthwick and P. H. Taylor 1777

Numerical simulation of flapping-wing insect hovering flight at unsteady flow: D. Zuo, S. Peng, W. Chen and W. Zhang 1801

Numerical simulation of natural and mixed convection flows by Galerkin-characteristic method: M. El-Amrani and M. Seaïd 1819

Numerical simulation of fully nonlinear irregular wave tank in three dimension: D. Z. Ning and B. Teng 1847

Direct sensitivity analysis for smooth unsteady compressible flows using complex differentiation: S. Lu and P. Sagaut 1863
